CERTIFICATION PROCESS

Vendors receive unique sets of randomly generated member-level test data, or “test decks,” which they process for each measure their HEDIS software calculates. The vendors’ results are compared to the expected results to determine if the software computed HEDIS correctly for numerators, denominators, and exclusions. If not, the vendors can correct the code, get a new deck, and repeat the process.

PRODUCT OVERVIEW

Innoapp HEDIS is a SQL Server/ASP.NET based HEDIS reporting engine. Innoapp HEDIS calculates 62 measures, as well as the systematic hybrid samples, included in the NCQA’s HEDIS Software CertificationSM Program. Innoapp HEDIS determines rates and scores for all product lines: commercial, Medicare and Medicaid.

PROCESS

Innoapp receives and imports client data into the Innoapp HEDIS engine. Once the HEDIS engine completes the rating process, clients access results via an integrated web portal. The web portal contains measure results, reports and capability to download the completed IDSS and PLS files for submission to NCQA by clients.

FILE LAYOUT INFORMATION

Innoapp HEDIS provides a set of simple flat file layouts. As an additional service, Innoapp HEDIS can perform data conversion for clients into the required layouts.
